Qulto Digital Document Delivery Platform

The main goal of the Qulto Digital Document Delivery Platform is to enable access to the digital holdings of any library consortium. It provides collaborative digitization workflows together with the management of copyright and digitization status. The system offers remote access to public domain documents, orphan works and standard copyrighted works. Furthermore, it enables digital access to out-of-print copyrighted books, and on-demand user requests are given priority during the digitization process. The Qulto Digital Document Delivery Platform is designed for partnerships established by libraries, publishers and other related stakeholders.

The aim of ELDORADO is to provide access in digital form to documents stored in library collections, primarily to out-of-commerce publications which are practically impossible for users to buy via the traditional commerce channels. User of ELDORADO can be any citizen, regardless whether he or she is a registered reader of a certain library or not.
